

Abu Dhabi Ship Building (ADSB) has a solid reputation as the regional leader in the design, new build, repair, maintenance, refit and conversion of naval and commercial vessels. ADSB successfully expanded its services portfolio beyond its traditional industries of focus by providing fabrication, maintenance and refurbishment services for rigs and platforms in the offshore oil and gas sector.

With almost three decades of service to the UAE and beyond, ADSB has evolved into one of the most experienced and advanced shipyards in the region, establishing a key role in strengthening the UAE's naval defence capabilities and further afield to key markets. Over the years, ADSB has developed specialised know-how and now offers a broad range of its own designs, from interceptors and patrol vessels to frigates and corvettes up to 92m.

ADSB is committed to becoming a leader in the shipbuilding industry by delivering innovative and dependable solutions using state-of-the-art technology. The company seeks to build lasting relationships that bring added value to clients and other stakeholders, both military and commercial, on a regional and global scale.

With core technical expertise in marine and naval project management, ADSB offers a one-stop-shop to the UAE's Navy flagship programmes for the conversion of ships with enhanced combat capabilities, along with specialising in the fabrication of commercial vessels up to 80m in length. ADSB builds and operates three main naval programmes: corvettes, offshore patrol vessels and interceptors – including the region's largest naval shipbuilding programme for UAE Navy's four Falaj3 offshore patrol vessels, six Baynunah-class corvettes, and the Arialah offshore patrol vessels.

In addition to the manufacturing of military and non-military vessels, ADSB also provides a full range of maintenance, repair and refit, upgrade and conversion, and engineering consultancy services, as well as long-term sustainment capabilities to naval and commercial customers. The company's global network of agents spans 17 countries and brings a unique set of professional and technical expertise that adds value to ADSB's portfolio of products and services.

Committed to the highest standards of quality and operational excellence, ADSB deploys the latest technologies to maximise fleet availability, extend ship lifetimes, and lower overall lifecycle costs. These technologies are integrated with the long-term maintenance programmes undertaken by ADSB on behalf of the UAE naval fleet, in line with the UAE Critical Infrastructure and Coastal Protection Authority. ADSB's extensive facilities management provides a range of logistics and workshop support services, where the UAE's entire naval workshop network is operated. Civilian maintenance programmes include the refurbishment of rigs and platforms – emphasising ADSB's mandate and vision as being a leader in manufacturing and maintaining non-military and non-naval assets.
