

Company Profile

About REMAYA

With the constantly changing spectrum of threats facing the globe, defence forces today need to be more flexible and responsive than ever. They must be ready for any challenge an operation might throw at them. REMAYA creates and delivers world-class military grade shooting ranges from the initial design and development stages right through to operations and management and imparts live-fire training to organisations serving and enhancing the skills of defence forces.

Part of the Trading & Mission Support cluster of EDGE, REMAYA is a leader in ensuring the highest levels of survivability for military and security personnel – whether on the battlefield or on a mission. Since its establishment in 2009, the company has been entrusted with protecting interests and advising clients, including governments, international entities and corporations operating across the globe.

REMAYA's core capabilities comprise military training facility design and development, project management, shaping policy, building live-fire target systems, video simulation, range operations and maintenance. The company's programmes focus on equipping armed personnel for the future battlefield and an evolving threat profile.

The company also provides US state department certified WPS (World Protection Services) certification program, US DOD SSS (Security Support services), Mission Support, Defensive Driving, Close Protection and Close Quarters Combat (CQC) training, and HEAT (Hostile Environment Awareness Training) and official certification for range personnel.

REMAYA runs a state-of-the-art UAE NQA (National Qualifications Authority) training programme with 4 shooting ranges, three classrooms, a dojo, a paved driving track and an off-road driving zone. The centre provides training in a realistic location and under appropriate climatic conditions, using the latest customisable targetry systems and range management software. The company's unrivalled facilities also include a 3,000 sq m range systems installation, operations, maintenance and R&D workshop.

Training sites are tailored to clients' needs, with the ability to create ultra-realistic urban environments that replicate modern battlefield scenes. Soft targets are simulated using smart robotics, while 'location of miss and hit' (LOMAH) technology improves learning efficiency and accuracy. Practical hands-on techniques equip teams for tactical and target shooting and a whole range of risk and threat scenarios.

In addition to industry-leading facilities, at the heart of REMAYA's approach are more than 120 trained engineers and technicians working to create custom live-fire range environments. These

experts collaborate with clients to analyse training methods and understand their missions and goals before implementing 21st century technologies that incorporate cutting-edge approaches to modern training within a safe environment.
